mask learned UI rows
hash = state
actions at a state
keys, or one click per
colour component
transition graph per level
no-op / fatal / successor;
reversible once a way back
is known
priors per action type
responsiveness, reversibility
rate, winning-path types;
inverse pairs, undo check
policy
probe: win-path, undoable,
responsive first; route to the
cheapest frontier incl.
expected cost of getting back
